June 2025

Priorities

☑ **Priority 4:** Planning, Preparing, and Maintaining Facilities and Environments for Learning.

New High School Network Hardware Update

We're excited to announce that all network hardware for the new high school has officially arrived! We're currently coordinating with AGCM to establish a definitive timeframe for them to pick up and formally accept receipt of the equipment. This is a crucial step to ensure a smooth transition and accountability for all components.

In a proactive move, the wireless access points have already been successfully transferred to AGCM. This early delivery allows them to jumpstart the installation process, ensuring the school will have robust wireless connectivity in place well ahead of opening. We'll provide further updates as the installation progresses and the remaining hardware is transferred.

2025-2026 Technology Committee Planning Underway

Planning for the 2025-2026 Technology Committee is officially underway, spearheaded by Micaela Gissendanner. This committee will play a vital role in shaping the technological future of our district.

We anticipate sharing more detailed information, including meeting dates and times, in early August. At that point, we will also begin actively recruiting members for the committee. Our goal is to foster a diverse and inclusive group, ensuring strong representation from both the community and staff. We believe that broad stakeholder participation is essential to gather varied perspectives and address the needs of everyone impacted by technology decisions.
