

We upgrade our computer labs on a rotating basis to ensure our technology remains current and aligned with industry standards. The Game Design, Animation, and Computer Repair lab is next in this cycle and requires upgrades to both computers and furniture.

The existing furniture in this lab is not conducive to an optimal learning environment and does not adequately support the instructional needs of these programs. The lab is divided into two instructional areas: the front of the classroom is dedicated to Game Design and Animation, while the back room functions as a Computer Repair Lab. Upgrading the furniture will better support hands-on learning, improve workflow, and enhance student engagement across both program areas.
