

Building will be 12 x 24, each half is 12 x 12. The front half will be insulated and heated to keep the ski boots dry. The back half will be kept cold, which is actually better for the skis. The building will be built on skids so it is possible to move it if needed. The estimate is around \$9,000 to include a steel roof and siding. We are going to price out 4x8 smartside panels to see if we can cut some costs that way.
