1167	20.0000.2542.540.007.081.00	0.59067 0586	Charged unit to 10 degree sub cooling . Recommend call whomever does the BAS system, it is not sending power to a relay to turn on condenser. No cooling, singed in the front. Found low pressure switch open which lead me to check if we had refrigeration. System was completely flat at 0 psi. Began to charge system up with 100 psi of nitrogen to have found 3 leaks, liquid line king valve , solenoid valve and TXV. Insured everything was tightened had system at 100 psi of nitrogen and held for 2 hrs I proceeded to attach my vacuum for another 2 hrs to get any moisture that may have gotten in the line set . Was able to had 7 lbs of refrigerant but will need to return to charge properly. No cooling, singed in the front. Found low pressure switch open which lead me to check if we had refrigeration. System was completely flat at 0 psi. Began to charge system up with 100 psi of nitrogen to have found 3 leaks, liquid line king valve , solenoid valve and TXV. Insured everything was tightened had system at 100 psi of nitrogen and held for 2 hrs I proceeded to attach my vacuum for another 2 hrs to get any moisture that may have gotten in the line set . Was able to had 7 lbs of refrigerant but will need to return to charge properly.			1,888.72

3361	20.0000.2542.323.007.081.00	1	10-17-24 Room 41: The unit was in local control for the space temperature setpoint but the local setpoint was out of service causing the last reading of 69 degrees to become the permanent setpoint. Room 42: The hot water valve was not opening because the hot water enable setpoint was at 80 degrees while the water temperature in and out were reading 77 degrees. Adjustments were made to enable heat mode open the hot water valve lower the hot water available setpoint from 80 degrees to 70 degrees and change the dx Enable setpoint from 60 degrees to 65 degrees. Link 2 devices: Devices were dropping out due to SC global points running at 1-minute intervals which the old wireless WCIs couldn't handle. A new Air Fi WCI was used as a repeater and global setpoints were adjusted to run at longer intervals. Room 21: The unit took an extended time to connect through the SC. The local setpoint was put back in service and the binary setpoint "Local Setpoint Enable" was changed to local. The unit was reconfigured using a backup from the unit in room 22. Fan operation and heat mode were verified to reach the setpoint. Room 22: Connected to the unit and backed up the UC400 configuration which was then used to reconfigure the unit in room 21.	2,257.00

3362	20.0000.2542.323.007.081.00		1	08-30-24 09-04-24 10-04-24	Installed new WCI coordinates for link 2 and 3 as suggested by tech support. Could not find link 1 coordinator. After installation and reassociation of link 2 repeater devices on the link were still inconsistent. Attempted to update all unit wcis on the link but devices continued to drop out. Site SC is very slow to respond. Multiple log on/off attempts were made but it is recommended to upgrade the site building controller. Will need to return to add another repeater to link 2 but existing SC may still have issues. Will consult with tech support and my controls local supervisor for further advice.	7,807.48

3546	20.0000.2542.323.004.081.00	1	Invoice date: 10/24/24: Service on 10/15/24 at Indian Grove Elementary School, completed by Jason Brees: *Today, I demoted into site to service the tracer SC unit. The unit was operating as intended upon arrival. An override multistate was discovered, which could override the entire building at a priority 9. Adjusted the schedule to enable everything at a priority 8 for better functionality. Expressed concerns about the override button and its implications for building control. Left a message for the customer to discuss the possibility of removing the override feature. The unit continued to operate as intended upon departure. No additional work needs to be quoted at this time.*	864.00
