Subject: Expansion Tank

We are pleased to submit the following proposal for your review:

Currently there is still an old compression style tank on a stand for expansion. Since the boiler will be gone, it is a good time to remove the old tank and install an Aurora ASME pre-charged expansion tank. The old style will work, but not as well as a pre-charged one. If someone is not keeping a close watch on it and it over fills the compression area, the system will not work proper. Also, when I was draining it there was some mud in the bottom. I got a price for an Aurora 80 gallon pre-charged tank.

Cost to remove the old tank and replace with (1) new Aurora 80 gallon pre-charged tank: \$6,250.00
