The coronavirus pandemic has forced widespread school closures in the United States in an unprecedented disruption of K-12 schooling.

Use the map below to see state-level information about school closures.

School closures refer to the shutdown of physical buildings and traditional, in-person instruction.

32 states, 3 U.S. territories, and the District of Columbia have ordered or recommended school building closures for the rest of the academic year, affecting approximately 36.2 million public school students.

School closures due to coronavirus have impacted at least 124,000 U.S. public and private schools and affected at least 55.1 million students.

There are at least 98,000 public schools and at least 34,000 private schools in the U.S., according to the National Center for Education Statistics. Those schools educate almost 50.8 million public school students and 5.8 million private school students.
