

Technology Update

Completed Project(s):

-New fiber internet line installed and turned up. (Successfully worked with Region 20). This new internet line significantly boost our speeds, but can gain even more improvement once we finish our network remediation throughout the summer and into next year.

Monthly Accomplishments:

-Work hand in hand with vendors and contractors overseeing new building technology layout (wiring, cameras, alarm, phones)

-Setup, monitor & assist with technology side of STAAR testing. Worked with testing facilitators to ensure online student testing worked seamlessly.

- Preliminary layout project plans for summer WIFI upgrade.

- Research and present data for technology equipment in new building.

-Continue to assist teachers, administrators and staff with daily technology needs.
