

# Network Vulnerability Scan

## Description:

A vulnerability scan is a proactive health check for your network. Our Security Administrator uses industry-leading tools to identify missing patches, outdated updates, and configuration risks across your servers and PCs. You receive a detailed roadmap for remediation, ensuring your district stays ahead of potential threats.

### The Deliverables:

#### Comprehensive Audit

Detailed results for all network assets.

#### Remediation Guide

A clear list of recommended patches and system updates.

#### Security Roadmap

Actionable reports to guide your internal IT team.

**NOTE:** Cost is based in blocks of /24 IP Addresses. The free service for Tech20 Premier Members includes one /24 IP address scan.
