STAAR

40 In paragraph 30, what does the word *laboriously* mean?

- F** At great cost
- G** For good reason
- H** Quietly and in secrecy
- J** Slowly and with difficulty

1 The chart lists organisms in five different categories living near the Texas Gulf Coast.

Organisms Living Near the Texas Gulf Coast

Vegetation	Mammals	Invertebrates	Fish	Birds
<ul style="list-style-type: none"> • Algae • Willow oaks 	<ul style="list-style-type: none"> • River otter • Coyotes 	<ul style="list-style-type: none"> • Shrimp • Mosquitoes 	<ul style="list-style-type: none"> • Red drum • Pygmy sunfish 	<ul style="list-style-type: none"> • Laughing gulls • Wood ducks

Based on the chart, which food chain best models a flow of energy in this ecosystem?

- A** Sun → Mosquitoes → Shrimp → Coyotes
- B** Sun → Algae → Shrimp → Red drum
- C** Sun → Pygmy sunfish → Shrimp → Wood ducks
- D** Sun → Willow oaks → Algae → River otters

STAAR 2.0

Read this quotation from paragraph 1.

Not only is it a perfectly respectable Bengali good name, meaning "he who is entire, encompassing all," but it also bears a satisfying resemblance to Nikolai, the first name of the Russian Gogol.

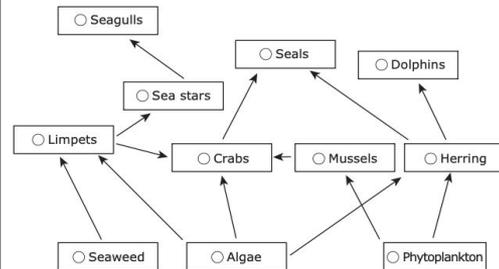

Record your answer in the space provided.

The author uses the word ____ (1) ____ to suggest that the name Nikhil is inclusive of two cultures.

1 _____

3 Which three populations compete for the same producer in this food web?

Select **THREE** correct answers.

Unit Title Weeks (days)																
Unit Overview																
Essential Questions																
Priority Standards (TEKS clarification) (leadword Field Guide)		Summative Assessment														
Elementary Math Instructional Block Instructional Minutes																
Daily Numeracy Routine 10% of Math Block	Conceptual Task 30% of Math Block	Teacher Small Group/Learning Tasks 50% of Math Block	Check for Understanding 8% of Math Block													
Dedicated time of the beginning of the math block to set a positive tone for learning. This time should build students' fluency and flexibility with numbers.	Teacher facilitates whole group lesson to build conceptual understanding of skills.	Time set aside for students to practice skills with teacher and peers. Practice with the teacher allows for immediate feedback of errors and praise.	Time set aside to formally or informally check students' understanding of skills in order to respond to students' or class needs.													
Vertical Alignment																
Pacing Guide

Belton ISD Instructional Framework

Intentional Planning

Intentional planning is the process of designing standards-based, data-driven, instruction with clearly communicated student outcomes.

Supporting Beliefs

- A deep knowledge and understanding of standards drives the lesson design and assessment of student learning.
- Intentional planning is centered on a student's learning needs and designed to grow the Journey of a Graduate competencies.
- Students will be able to explain what they are learning and why.
- Professional learning communities maximize and improve student learning.

Key Traits

- Aligned with standard
- Uses student data to inform instruction
- Holistic knowledge of students
- Engaging, flexible lessons

Challenging and Engaging Experiences

Challenging and engaging experiences are relevant and meaningful which spark students' curiosity and passion for learning.

Supporting Beliefs

- Every student will be challenged to grow as a learner.
- Students are engaged when they have ownership of their learning.
- Fostering curiosity and passion inspires students' dreams and empowers their future.
- Student's unique learning needs are met.

Key Traits

- Culturally relevant
- Learning connections are cross-curricular
- Student voice and choice

Assessment for Learning

Assessment for learning is a purposeful, intentional, and comprehensive approach to measuring students' knowledge and growth.

Supporting Beliefs

- Authentic assessment is purposefully designed to ensure hope, efficacy, and student growth.
- Assessments are intentionally designed to align with the standards and desired student outcomes.
- A comprehensive approach to assessment allows students to demonstrate their knowledge in a variety of ways.
- Student ownership, growth mindset, and continuous improvement are essential components of the assessment process.
- Meaningful and timely feedback is vital for student and teacher partnerships to foster growth.

Key Traits

- Professional learning communities create collaborative common assessments along with data analysis
- Students set learning goals with support and independently
- Use of Assessments:
 - Diagnostic assessments to identify what students know and need to know
 - Formative assessments to make in-the-moment, on-going instructional adjustments, and provide feedback to students about their learning
 - Summative assessments to allow students to demonstrate mastery of learning
- Use data to create a learner profile

Learning Space and Environment

The learning space is a shared domain to cultivate meaningful and challenging learning experiences. The environment provides clear, consistent routines, procedures, and expectations that foster individual and collaborative learning.

Supporting Beliefs

- Learning spaces should be intentionally designed to support student learning outcomes.
- Learning environments should be emotionally, physically, and socially safe to foster engagement and allow for risk-taking.

Key Traits

- Responsive and adaptive to student learning needs and intended outcomes
- Fosters student leadership
- Clear and consistent expectations
- Collaborative environment

Evidence of Critical Thinking

A BISD Learning gathers, analyzes and reflects on information in order to solve problems and make informed decisions.

Elements	Student Evidence	Teacher Evidence
Asking questions	Students ask probing, insightful questions that demonstrate a deep understanding of the topic and a desire to learn more. Students engage in conversations that probe for deeper meaning.	The teacher facilitates discussion by asking open-ended questions with appropriate wait time to encourage conversation, active learning and push students to probe for deeper meaning.
Analyzing information	Students analyze information from a variety of sources, identifying strengths and weaknesses, biases, and assumptions.	The teacher creates opportunities for students to analyze information from a variety of sources and models how to identify strengths and weaknesses, biases, and assumptions in information.
Evaluating arguments	Students carefully evaluate arguments, considering different perspectives and weighing evidence fairly.	The teacher provides students with opportunities to evaluate arguments from different perspectives, and models how to weigh evidence fairly.
Drawing conclusions	Students interpret information and draw well-supported conclusions based on the analysis of evidence.	The teacher provides students with opportunities to interpret information and draw conclusions based on the analysis of evidence and models how to support their conclusions.
Communicating ideas	Students clearly and concisely communicate their ideas in a way that is effective and easy to understand. Their writing or speech is well-organized and logical, and they use evidence to support their claims.	The teacher creates a safe environment and provides students with opportunities to communicate their ideas in an effective way, and models how to use evidence to support their claims.

Intentional Planning Tool

1 What do we want students to know?

Big Picture

- Why is this unit important?
- Why does it matter?
- Big Idea
 - Essential Question(s)
 - Journey of a Graduate

Standards

- What standards are being taught?
- What are the priority standards for the unit?
- How have these standards been tested in the past?
- What do we want students to know (content) and be able to do (skills)?

Prior Knowledge

- What should students already know?
- What information do we have to show what students already know?
- What implication does this data have on instruction?

2 How will we know if students learned it?

Alignment

Are all assessments aligned to standards in both content and rigor?

Summative Assessment

- What summative assessment(s) will students experience?
- What evidence will the teacher acquire to know students are working toward mastery of the standards?
- When / How can students choose to demonstrate mastery of skills?

Formative Assessments

- How will you measure mastery of the learning targets? (describe student tasks)
- Can students demonstrate their knowledge in a variety of ways?
- How will you provide feedback regarding progress?

3 What is the Learning Plan?

What is Our Response?

Instructional Strategies

- How do I structure my instructional minutes?
- Am I promoting: curiosity, critical thinking, and/or perseverance?
- Is this strategy moving from teacher centered to student centered?
- How can I clearly demonstrate how to work towards mastery for the standard(s)?
- How can I model mastery?

Learning Tasks

- Are tasks aligned to the standard?
- Are tasks student-centered to encourage collaborative work?
- Is there ample time for student discovery and independent practice?
- Do tasks provide opportunity for communication (oral and written)?
- Do tasks provide student choice?
- What Journey of a Graduate competencies are connected to the learning tasks?

29

Did Students Learn it?

- How can students apply their knowledge to a new scenario?
- How can students deepen their learning of a standard?

Are students struggling?

- How will we reteach?
- Whole group?
 - Small group?
 - Individual?
- When will we reteach?
- Before moving on?
 - Spiraling?
- How will we know if it worked?

Multiplication & Division
7 Weeks (31 days)

[Math Guiding Document](#) and [Classroom Look Fors](#)

Unit Overview

Mathematicians will continue to deepen their understanding of multiplication and division by using a variety of strategies and the algorithm to determine a product or quotient of a problem. Learners will use these strategies to estimate and solve multi-step word problems with fluency and accuracy. Learners will practice the skill of interpreting remainders to solve problems. Learners will continue to develop their understanding of patterns by analyzing the relationship between a number pattern and a given rule.

Essential Questions

Where would we use multiplication and division in our daily life?
How do strategies help us multiply and divide?

Priority Standards (TEKS clarification) ([lead4ward Field Guide](#))

4.4- *The student applies mathematical process standards to develop and use strategies and methods of whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:*

(H) solve with fluency one and two step problems involving multiplication and division , including interpreting remainders

4.5- *The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to:*

(A) represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity

(B) represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence

[Summative Assessment](#)

[Formative Assessment](#)

Process Standards:

The student uses mathematical processes to acquire and demonstrate mathematical understanding. The student is expected to:

- **4.1(B)** use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution and evaluating the problem-solving process and the reasonableness of the solution.
- **4.1(C)** select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems.
- **4.1(G)** display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

Elementary Math Instructional Block
Instructional Minutes

Daily Numeracy Routine 10% of Math Block	Conceptual Task 35% of Math Block	Teacher Small Group/Learning Tasks 50% of Math Block	Check for Understanding 5% of Math Block
Dedicated time at the beginning of the math block to set a positive tone for learning. This time should build students' fluency and flexibility with numbers.	Teacher facilitated whole group lesson to build conceptual understanding of skills.	Time set aside for students to practice skills with teacher and peers. Practice with the teacher allows for immediate feedback of errors and praise.	Time set aside to formally or informally check students' understanding of skills in order to respond to students' or class needs.

Vertical Alignment

Third	Fourth	Fifth
3.4(K) solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects; pictorial models, including arrays, area models, and equal groups; properties of operations; or recall of facts	4.4(H) solve with fluency one and two step problems involving multiplication and division , including interpreting remainders	5.3(B) multiply with fluency a three-digit number by a two-digit number using the standard algorithm 5.3(C) solve with proficiency for quotients of up to a four-digit dividend by a two-digit divisor using strategies and the standard algorithm

<p>3.5(A) represent one- and two-step problems involving addition and subtraction of whole numbers to 1,000 using pictorial models, number lines, and equations</p> <p>3.5(B) represent and solve one- and two-step multiplication and division problems within 100 using arrays, strip diagrams, and equations</p> <p>3.5(D) determine the unknown whole number in a multiplication or division equation relating three whole numbers when the unknown is either a missing factor or product</p>	<p>4.5(A) represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity</p>	<p>5.4(B) represent and solve multi-step problems involving the four operations with whole numbers using equations with a letter standing for the unknown quantity</p>
<p>3.5(E) represent real-world relationships using number pairs in a table and verbal descriptions</p>	<p>4.5(B) represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence</p>	<p>5.4(C) generate a numerical pattern when given a rule in the form $y = ax$ or $y = x + a$ and graph</p> <p>5.4(D) recognize the difference between additive and multiplicative numerical patterns given in a table or graph</p>

Pacing Guide

<p>Bundle #1 Multiplication of Whole Numbers (8-10 days)</p>	<p>Bundle #2 Division of Whole Numbers (8-10 days)</p>	<p>Bundle #3 Problem Solving (8-10 days)</p>
---	---	---

Flex Days are built in to allow for response of student and class data throughout the unit. These days will allow you some flexibility in the pacing of the unit. You will need to allocate days for collection and analysis of data.

Bundle #1

Multiplication of Whole Numbers (8-10 days)

TEKS

4.4- *The student applies mathematical process standards to develop and use strategies and methods of whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:*

(B) determine products of a number and 10 or 100 using properties of operations and place value understandings

(C) represent the product of 2 two-digit numbers using arrays, area models, or equations including perfect squares through 15 by 15

(D) use strategies and algorithms including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number. Strategies may include mental math, partial products, and the commutative, associative and distributive properties

(G) round the nearest 10, 100, or 1,000 or use compatible numbers to estimate solutions involving whole numbers

Process Standards

Academic Vocabulary

Factor, product, area model, array, perfect square, partial products, standard algorithm

4.1(C) select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems.

4.1(G) display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

Misconceptions/Look Fors

Adding instead of multiplying

Not connecting multiplication to area

Not understanding how to convert factors into expanded form by place value

Forgetting to add regrouped digit or adding the regrouped digit and then multiplying by that sum

Conceptual Tasks

[Math Discourse Cards](#) [Math Talk Stems](#)

Teacher Small Group

Learning Tasks

Learning Target/Resource

Manipulatives/Tools

Instructional Strategy/Focus

I can determine products of a number and 10 or 100 using properties of operations and place value understandings.
4.4B

Calculator (either on Chromebook or 4 function calculator)

Worksheet with 6 problems for each group—see resource for example

This lesson builds on place value understanding. The focus of this lesson is not on the process of multiplication, but the patterns of place value.

MIP Developing the Area Model pg. 92-93

MIP Extending the Area Model pg. 93-94

MIP Transitioning to Rectangle Models pg. 95-97

MIP Exploring Multiplication with a 3-Digit Factor pg. 98

Lesson Resource
[Click on TEKS activity 4.4B](#)

Paper/pencil

Whiteboards/markers

Students will be placed in groups (you will need an EVEN number of groups, because groups will partner up after completing their task) and given a calculator to solve.

The important part of this lesson comes from the discussion after the activity is complete. Be sure to ask the questions listed in the activity under whole group discussion. Link the pattern they noticed to place value understanding.

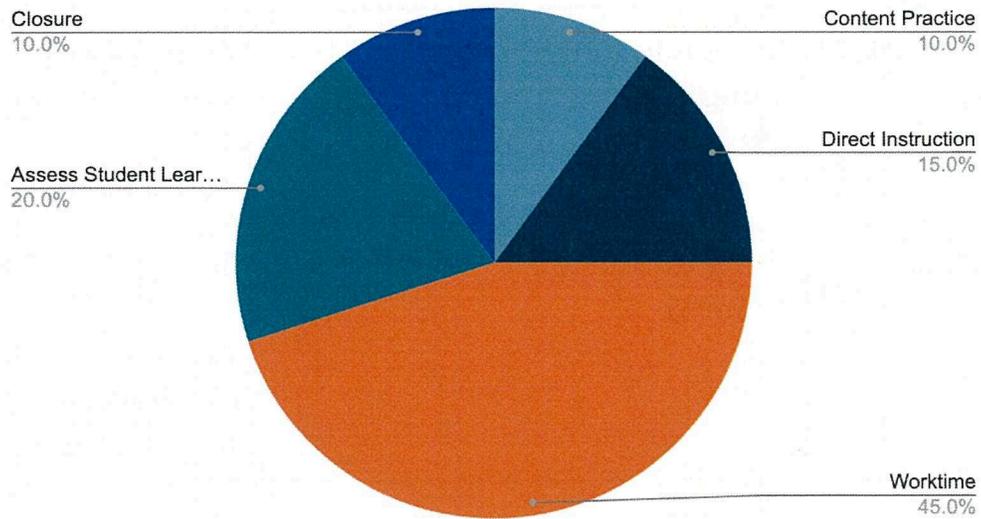

Check for understanding: Give the following problems for students to solve.

34 x 10 34 x 100 10 x 34 100 x 34				
Learning Target/Resource	Manipulatives/Tools	Instructional Strategy/Focus		
I can create a model to show multidigit multiplication. I can multiply a 1-digit number by a multidigit number. 4.4C	Base Ten Blocks	Today is going to be a review of 2x1, 3x1, and an introduction of 4x1 multiplication. Students will use base 10 blocks to represent the problems and teachers/students will discuss how to link it to an array and an area model. As you walk around and observe students working, make note of who needs extra support, needs more practice or is ready to move on.		
Lesson Resource MIP About the Math pg. 88-90 Use Figures 5.1- 5.4				
Check for understanding: Give students a 4 x 1 multiplication problem to solve on an index card or sticky note.				
Learning Target/Resource	Manipulatives/Tools	Instructional Strategy/Focus		
I can represent the product of 2 two-digit numbers using arrays. 4.4C	Grid paper Colored pencils or crayons pencils	Ask: What is an array? How can we use arrays for larger numbers? Activity: Have students get out blue, green, orange and purple colored pencils or crayons. Hand out grid paper. Start the Interactive Lesson on your projector. When it asks a question, stop and discuss with your students. Have students follow along with the lesson on their grid paper.		
Lesson Resource Go Math Lesson 8.3 Interactive Student Edition (Only do the first example—breaking 13 and 18 into tens and ones)				

Secondary ELAR Instructional Minutes

Focus	Percentage of Instructional Time
Content Practice: - Independent Reading - Patterns of Power Grammar Approach	10%
Direct Instruction Learning target established Mini-lesson	15%
Student Worktime Apply learning Formative assessment	45%
Assess Student Learning	20%
Learning Closure	10%

Instructional Minutes

Instructional Minutes Example - 50 Minutes

Minutes	Focus	Student's Responsibility	Teacher's Responsibility
10 - 15	Content Practice	Read self selected text Participate in Patterns of Power Grammar moment	Conference with students during reading Guide grammar moment
10 - 15	Direct Instruction	Take notes Actively listen Contribute to discussion (when applicable)	Clearly communicate the learning target Give direct instruction to model/explain a skill, a concept, a strategy, or a process
20 - 25	Worktime Apply learning	Work independently and/or collaboratively with others Apply learning from direct instruction	Conference with students Lead small groups through individualized instruction Re-teach as learning needs arise
10	Assess Student Learning	Complete summative or formative assessment to demonstrate learning / skill	Assess student work to determine status of student learning / skill Adjust instruction accordingly
5 - 10	Learning Closure	Share and/or reflect on the day's learning	Sum up the day's learning Assess if students met the requirements of the learning target, and how to respond.
